

User Password Reset & Lockout Recovery Guide

This guide describes the standard procedure for resetting user passwords, managing account lockouts, and recovering credentials on the platform.

1. Standard Password Reset via Portal:

Users can initiate a password reset by navigating to the login screen and clicking 'Forgot Password'. The system will prompt for the registered email address. If the email matches an active account, a secure reset link containing a cryptographic token is dispatched. The token remains valid for exactly 30 minutes. Once clicked, the link redirects the user to a page requiring a new password matching our security policy.

2. Password Complexity Requirements:

Passwords must be at least 12 characters in length, containing at least one uppercase letter, one lowercase letter, one numeric digit, and one special character (e.g., !, @, #, \$, %, ^). Repeating characters are limited to 2 consecutive occurrences.

3. Account Lockout Prevention & Recovery:

To protect against brute-force attacks, accounts are automatically locked after 5 consecutive failed login attempts. The lockout duration is set to 30 minutes. Users can bypass the lockout wait time by executing a lockout recovery verification. A recovery email is sent to the address on file containing a 6-digit verification code. Entering this code allows the user to immediately unlock their account and attempt login or reset their password.

For manual administrator overrides, support agents can navigate to Admin Console > Users, find the locked profile, and click 'Unlock User Profile'. This takes effect immediately.
